- Monitor the effectiveness through broadcast reporting
- Mobilize and allocate resources in an emergency
- Event notification and incident command
- Comprehensive service in addition to information security and backup

Alert. Notify. Communicate.

Tragedies like 9/11, natural disasters and violence in schools have made us recognize how critical communication is during an emergency. InfoMetrics Rapid Alert enables web based emergency event notification to thousands of recipients quickly and efficiently. Through minimizing the time required for communication, attention is better focused on disaster management and business continuity.

Effective Communication Simplified

A customizable message is easily initiated from any phone or browser and almost instantaneously broadcasted to multiple communication devices, including landline and cellular phones, email, text messaging, pagers and PDAs. Rapid Alert enables two-way communication with message recipients assisting recovery through collaboration.

InfoMetrics Rapid Alert provides a user-friendly interface and customizable message and delivery options. No special end user training is required, allowing for a broadcast to be initiated and evaluated simply and easily by an administrator. Detailed reporting allows for analysis of the broadcast to ensure communications are effective.

Rapid Alert for Everyday

Strengthen your return on investment by using your Rapid Alert system to create a strengthened communications strategy. Rapid Alert is the answer to creating a unified communication network that will not only allow you to communicate quickly in the event of an emergency, but also streamline your daily communications. A strategic communications plan is essential to the operation of any organization and with InfoMetrics, communication has never been so effective.

Communication Customized

Information management with Rapid Alert is efficient and current. Information is kept up to date by sending reminders for recipients to update their profiles through a self-populating website. Users can enter up to five contacts, prioritizing the order in which they would like to be contacted. Rapid Alert will leave messages, convert text to voice, and try multiple communication methods to contact a recipient. InfoMetrics Rapid Alert makes communication faster, current, and simplified.

The Power of Rapid Alert

- Business continuity
- Meeting reminders and ad hoc meeting requests
- Crisis management and disaster recovery
- Service outage and restoration communication
- Weather warnings
- Interactive notification
- Follow-up notification
- Information collection
- Interactive surveys and questionnaires
- Connect quickly to emergency services
